

RGB or RGBW DMX controllers/ Controlador RGB ó RGBW DMX

The RGB LED or RGBW LED spotlights from a fountain are managed by RGB or RGBW controllers. These controllers can achieve hundreds of thousands of colors by the basic color addition method (RGB or RGBW). Mixing a part or the total of each basic color all other colors are obtained. SAFE RAIN has controller models that can work autonomously, have pre-programmed output sequences and other models that can also do it in a DMX frame as an addressable channel of the system with DMX input and output. With these controllers we control bulbs of up to 4 colors, red (R), green (G), blue (B) and white (W). They have 18 to 49 sequences already programmed (depending on model) that include the most common color combinations. Likewise, both the speed of the changes and the intensity of each color can be regulated separately or even the duration of these.
