

WATER CURTAIN

The digital water curtain stands out for its uniqueness in the world of architectural fountains.

Far removed from the familiar architectural fountains found in our cities, the digital water curtain has a character all its own. It stands out for the splendour of its elements, which **combine technology, hydraulics, engineering and lighting to create a water show that will leave no one indifferent.**

The digital water curtain is a **dynamic wall of water**. It is made up of multiple vertical jets. Given its advanced configuration, **it allows us to design and colour patterns, logos, shapes or letters that are then printed on the water.**

Thanks to **the control software** developed by SafeRain and the use of fast-acting solenoid valves, we are able to draw your idea on the water.

We offer the curtain in 2m and 3m water modules with no length limit.

PRODUCTS - DIGITAL CURTAIN

- ELEMENTS
- COMPONENTS
- CONTROL SOFTWARE
- INTERACTIVE MODULES
- AVAILABLE CONFIGURATIONS
- WATER MODULES

ELEMENTS

01. WATER MODULES

Water modules, which are an external structure to which a stainless steel collector is attached. From this point, all the elements of the digital water curtain will be supported.

02. VERTICAL JETS OF WATER

Vertical jets of water are drawn through ultra-fast solenoid valves, creating a wall of water onto which the shapes, words or logos that we have previously designed with our tablet, from which we manage the operation of our digital curtain, will be printed.

03. WATER TANK

Water tank for collection and reuse. The water is pumped back to the top by a submersible pump. In this way, our digital water curtain promotes responsible water consumption.

ELEMENTS

CONTROL AND INTERACTIVE SOFTWARE

For any body to function, it needs a **brain** to govern it.

Thanks to our water technology, we have designed and implemented **specific software** to control the digital water curtain.

This software consists of a **desktop version** from which to check the patterns designed before they are displayed on the water, and **execution software**, which is responsible for checking the correct installation of our curtain.

To complete the control functions, an **application for tablets** is included.

From the comfort of the app, we create designs that are immediately displayed on the water.

Programming software and control software for PC

Interactivity with tablet

COMPONENTS

WATER CURTAIN

Water modules	
Control software	
Electrical conductors	
Lighting	
Anemometer	
Automatic filling	
Interactivity Presence and Push Buttons	
Water pump	
Water tank	
Truss gantry	
Interactivity module with tablet	
Video projection	

CAPTION

- Essential elements
- Optional elements
- Items not included

WATER MODULES

The entire system is designed in **2- and 3-metre modules**, which can be arranged in **different geometries**.

ELECTRICAL PANEL

This includes the **control and power elements** necessary to start up the installation. The power section includes all the necessary differential and circuit breaker elements, together with **the frequency converter** that controls the **water pump**.

SOFTWARE

All elements are managed using the **SafeRain control software**.

ELECTRICAL CONDUCTORS

XLR input and output **connector** for data control. Input and output connector for solenoid valves and lighting power.

LIGHTING

Lighting with **90W 4-in-1 RGBW LED spotlights with DMX control** and **1 metre length**. Electronic control modules for solenoid valves and RGBW LED spotlights.

ANEMOMETER

Measures wind intensity. Helps **reduce splashing and water loss**.

AUTOMATIC FILLING

Includes an automatic filling system through which we can **programme filling** when necessary.

INTERACTIVITY AND BUTTONS

Through a system of **buttons** or **presence sensors**, we can involve the public in the water show they are attending.

WATER PUMP

This pumps the water from the tank to the inlet of the first module, thus creating the required patterns. Suitable for **submersible or dry pumps**.

WATER TANK

Located at the bottom of the digital water curtain, it **collects the water** to pump it back to the top.

TRUSS PORTICO

In cases where there is no fixed or reinforced ceiling, a **structure** capable of **supporting the** digital water curtain **modules** must be built.

VIDEO PROJECTION

Optionally, you can use video projection to **show your customers** any type of **advertising or corporate presentation**.

CONTROL SOFTWARE

Using **proprietary software**, we control high-speed solenoid valves to **create water figures and text in the air**. At the same time, we can apply lighting to the space. Current technology allows us to bring spectacular effects to life with what makes us happy: water.

01. DESKTOP SOFTWARE

Equipped with a **simulator**, users can **check their patterns, colours, texts, etc.** before displaying them on the digital water curtain. Using external memory, they can transfer their creation to a computer.

02. RUNNING SOFTWARE

Using **this software, available on the control panel**, all the necessary **tests** will be carried out to check that the digital water curtain has been correctly installed, reading the desktop software file.

CONTROL SOFTWARE

WE SIMPLIFY THE PROGRAMMING OF YOUR SHOW

Our innovative technology incorporates **predefined water and light patterns**, designed to facilitate the programming of stunning visual shows.

The water effects available include shapes as varied as **curtain, rain, snow, zigzag, checkerboard**, among others, allowing for great creative versatility.

In addition, you can **project text and images directly onto the water**, such as the **name of your show, your company logo**, or even **the date and time in real time**, adding a personalised and dynamic touch to each presentation.

The software also integrates a wide range of **professional lighting effects**, such as **flags, colour chases, and smooth transitions (fades)**, which enrich the visual experience and synchronise perfectly with the movements of the water.

INTERACTIVE MODULES

IN-PERSON INTERACTIVITY AND INTERACTIVITY VIA BUTTONS

Our digital curtain offers **two innovative forms of interaction** that transform each experience into something unique and memorable.

The **in-person interaction module**, using strategically placed sensors, activates **surprising effects when it detects the user's presence**, creating unique and memorable moments.

On the other hand, **the push-button interaction module** offers direct control through fully configurable **physical buttons**, allowing the user **to trigger specific effects simply by pressing them**.

Two ways to connect with the audience, multiply the impact and arouse emotions.

	MAXIMUM NUMBER OF INTERACTIONS CONFIGURABLE	TYPE OF ACTUATOR	TYPE OF EFFECT TRIGGERED
PRESENCE SENSOR	1	PRESENCE DETECTOR	DOOR OPENING
PUSH BUTTONS	5	PUSH BUTTON	ACTIVATES A SPECIFIC WATER FEATURE

INTERACTIVITY VIA TABLET

With this module, **the viewer becomes the true star of the show**.

Through an **intuitive application**, they can **draw, write and apply colours** directly from a tablet, watching **their creations come to life in real time** on the digital water curtain.

This **immersive** and highly personalised **experience** not only surprises, but also generates a unique emotional connection with the audience.
